SKILLS

TypeScript, Playwright, Java, Selenium, REST Assured, Python, Appium

EDUCATION

BSc Computer Science
Plovdiv University "Paisii Hilendarski"
2000–2004

CERTIFICATIONS

DevOps Essentials — Pragmatic LLC (2025)

Web Services Testing (Foundation) — Pragmatic LLC (2021)

Automated Testing (Foundation) — Pragmatic LLC (2021)

Commodities & Currencies Futures Trading — Trading Advantage (2014)

PROFESSIONAL SUMMARY

Fullstack Quality Engineer who owned mobile QA for MiLB, Wall Street Journal, and Wattbike — app store ratings rose from below 3 to 4.7 stars with 99% crash-free releases across iOS and Android. Currently building AI-powered QA tooling at Bugzy AI using TypeScript, Playwright, and the Anthropic SDK.

EXPERIENCE

Software Engineer (Contributing)
Jan 2026 – Present

Bugzy AI

- Researched, built, and shipped a Zephyr Scale integration enabling AI-generated tests to be pushed and edited directly in Jira
- Built using Claude Code and the Anthropic SDK on a TypeScript + Playwright stack

Mentor
Oct 2025 – Jan 2026

Mentor the Young - Bulgaria

- Mentored a junior engineer through an 11-week QA program who built a complete professional portfolio: 50+ test cases, BDD scenarios, bug reports, and Python automation — averaging 85/100
- Mentee improved from 76/100 to 94/100 in three weeks after hitting the hardest module, demonstrating the program's feedback loop worked
- Open-sourced the full curriculum on GitHub for community reuse

Career Break
Apr 2025 – Oct 2025

- Delivered somaholistic.studio for a client using AI-assisted development with Claude Code and the BMAD Method
- Built 3 test automation frameworks (Playwright + TypeScript, Selenium + Java, REST Assured + Java) and personal portfolio site

Mobile QA Engineer
Jan 2016 – Apr 2025

Tumba Solutions

- Rebuilt MiLB iOS and Android test suites from zero as sole QA — 80-100 cases per platform, app store ratings rose from below 3 to 4.7 stars, 99% crash-free. Reviewed Java + Appium automation running on SauceLabs
- Reduced external crowd-testing costs to zero on MiLB by adopting shift-left feature testing from WSJ workflows
- Tested WSJ mobile apps across iOS and Android phones and tablets serving 100K+ users with distributed teams in the US, India, and Barcelona — covering feature testing and bi-weekly regressions, transitioning test management from Excel to Zephyr Scale
- Sole QA for WSJ City (London/Europe edition) — built 100-120 test cases, maintained 97%+ crash-free releases. Features developed here were later adopted by the main WSJ app
- Sole QA for Wattbike — validated live cycling data across hardware monitors, mobile apps, Bluetooth, and third-party integrations (Strava, Zwift)
- Trained a colleague to run regressions independently within 2 months — still owns MiLB as sole QA over a year later

Co-founder
Feb 2012 – Dec 2015

Inozona

- Co-founded and self-financed a sports analytics platform for football team performance analysis, modeled after Opta/Prozone for the Bulgarian market
- Designed the product with co-founders, managed infrastructure, and handled all business operations (legal, finance, client acquisition)
- Secured first client (Slavia FC) who used the service for 3 months

QA Engineer
Nov 2007 – Feb 2015

VMware

- Tested VCloud UI (browser) and vSphere Client (desktop) as part of a 10-15 person QA team, creating and maintaining test cases and test plans
- Sole QA for VM Stats Provider — owned test creation, execution, post-mortem analysis, and status reporting for a cross-continental team with a US-based PM
- Validated Windows VM performance counters against ESXi host metrics, ensuring data accuracy across virtualization layers

QA Engineer
May 2007 – Oct 2007

Sciant (acquired by VMware)

- Validated ESX Server core functionality — specialized in HDD, Video, and Network driver testing

FEATURED PROJECTS

Playwright TypeScript Framework

UI and API test framework with Page Object Model, fixture injection, and live Playwright HTML report.

TypeScript · Playwright · GitHub Actions

DummyJSON API Test Framework

API test automation covering authentication and CRUD endpoints with CI/CD and live reporting.

Java · REST Assured · Allure

QA Mentorship Program

Comprehensive QA training curriculum for aspiring quality engineers.

QA Process · Testing Fundamentals · Best Practices
