Trading — Trading Advantage (2014)

PROFESSIONAL SUMMARY

Fullstack Quality Engineer who owned mobile QA for MiLB, Wall Street Journal, and Wattbike — app store ratings rose from below 3 to 4.7 stars with 99% crash-free releases across iOS and Android. Recently shipped a Zephyr Scale + AI integration at Bugzy.ai using TypeScript, Playwright, and the Anthropic SDK.

EXPERIENCE

Software Engineer

January 2026 – March 2026

Bugzy.ai

- Contributed to an AI-powered QA tool — added Zephyr Scale integration that was missing from the product
- Researched, built, and shipped a Zephyr Scale integration enabling AI-generated tests to be pushed and edited directly in Jira

Mentor

Oct 2025 – Jan 2026

Mentor the Young - Bulgaria

- Mentored a junior engineer through an 11-week QA program who built a complete professional portfolio: 50+ test cases, BDD scenarios, bug reports, and Python automation — averaging 85/100
- Mentee improved from 76/100 to 94/100 in three weeks after hitting the hardest module, demonstrating the program's feedback loop worked
- Open-sourced the full curriculum on GitHub for community reuse

Career Break

Apr 2025 – Oct 2025

- Delivered somaholistic.studio for a client using AI-assisted development with Claude Code and the BMAD Method
- Built 3 test automation frameworks (Playwright + TypeScript, Selenium + Java, REST Assured + Java) and personal portfolio site

Mobile QA Engineer

Jan 2016 – Apr 2025

Tumba Solutions

- Rebuilt MiLB iOS and Android test suites from zero as sole QA — 80-100 cases per platform, app store ratings rose from below 3 to 4.7 stars, 99% crash-free. Reviewed Java + Appium automation running on SauceLabs
- Reduced external crowd-testing costs to zero on MiLB by adopting shift-left feature testing from WSJ workflows
- Tested WSJ mobile apps across iOS and Android phones and tablets serving 100K+ users with distributed teams in the US, India, and Barcelona — covering feature testing and bi-weekly regressions, transitioning test management from Excel to Zephyr Scale
- Sole QA for WSJ City (London/Europe edition) — built 100-120 test cases, maintained 97%+ crash-free releases. Features developed here were later adopted by the main WSJ app
- Sole QA for Wattbike — validated live cycling data across hardware monitors, mobile apps, Bluetooth, and third-party integrations (Strava, Zwift)
- Trained a colleague to run regressions independently within 2 months — still owns MiLB as sole QA over a year later

Co-founder

Feb 2012 – Dec 2015

Inozona

- Co-founded and self-financed a sports analytics platform for football team performance analysis, modeled after Opta/Prozone for the Bulgarian market
- Designed the product with co-founders, managed infrastructure, and handled all business operations (legal, finance, client acquisition)
- Secured first client (Slavia FC) who used the service for 3 months

QA Engineer

Nov 2007 – Feb 2015

VMware

- Tested VCloud UI (browser) and vSphere Client (desktop) as part of a 10-15 person QA team, creating and maintaining test cases and test plans
- Sole QA for VM Stats Provider — owned test creation, execution, post-mortem analysis, and status reporting for a cross-continental team with a US-based PM
- Validated Windows VM performance counters against ESXi host metrics, ensuring data accuracy across virtualization layers

FEATURED PROJECTS

Playwright Framework

UI and API test framework with Page Object Model, fixture injection, and live Playwright HTML report.

TypeScript · Playwright · GitHub Actions

QA Ranger

Claude Code agent that converts project documentation into structured, submission-ready Gherkin test cases.

Claude Code · AI Agent · Gherkin

Selenium Framework

Selenium framework with risk-based test selection, Allure reporting, and documented ADRs.

Java · Selenium · TestNG · Allure

REST Assured Framework

API test automation covering authentication and CRUD endpoints with CI/CD and live reporting.

Java · REST Assured · Allure

QA Mentorship Program

Comprehensive QA training curriculum for aspiring quality engineers.

QA Process · BDD · Python

Quality Engineer Portfolio

Personal portfolio site showcasing QA work, frameworks, and writing — source for aslavchev.com.

React · TypeScript · GitHub Pages
